

Jay Justice (jayjusti@iu.edu)

Sunny Troyer (suntroy@iu.edu)

John Clarckston (jtclarks@iu.edu)

John Jo (jowo@iu.edu)

C212-S25-GroupWork: Preface

All problems were tweaked as a group during various meetings over the project; however, each method had a main designer. Methods were lifted and put into the final project based on who had the shortest and most efficient implementation. Each participant completed the assignment on their own, then one project file was made to be rewritten to include the best methods from each participant and turned in for the group (as well as making sure a roughly equal amount of work was included from each person). Formatting was made consistent across all methods for readability/cohesion. Part one was Sunny and John Jo, part two was done by John Clarkston and Jay Justice, and part three has code mostly from Sunny, along with smaller contributions from John Jo. Her code worked the best; everyone else struggled with that last part.

C212-S25-GroupWork: Design Breakdowns

Problem one:

1. Part A: readPpmImage
 - a. Method designed by Sunny Troyer
2. Part B: writePpmImage
 - a. Method designed by John Jo

Problem Two:

1. Part A: zeroRed
 - a. Jay J.
2. Part B: Grayscale
 - a. John C.
3. Part C: Invert
 - a. John C.
4. Part D: Mirror
 - a. Jay J.
5. Part E: Repeat
 - a. Jay J.
6. Part F: Rotate
 - a. John C.

Problem three:

This section will be formatted differently as the class is all one method. Sunny was the one to reach out for help on this section of the project, so her code was the most polished and, therefore, the most utilized. She, at various points, helped the rest of the group members figure out how to get GSON and the imports working correctly. Sunny did the majority of the work, though she worked in tandem with John Jo, who was a significant help. John Jo's work is particularly heavily utilized in creating the seven-day weather report.
